Aggregate Functions

You can perform basic calculations on table data and yield a single value as a result, using aggregate functions.

Aggregate functions

MIN()

MAX()

COUNT()

SUM()

AVG()

Aggregate functions ignore null values except count()

MIN()

```
SELECT MIN(salary) FROM Employee;
```

MAX()

```
SELECT MAX(salary) FROM Employee;
```

count()

1. SELECT COUNT(*) FROM Employee;

2. SELECT COUNT(age) FROM Employee;

3. SELECT COUNT(*) FROM Employee
WHERE salary > 15000;

4. SELECT COUNT(DISTINCT name)
FROM Employee;

SUM()

1. SELECT sum(salary) FROM Employee;

2. SELECT sum(salary) FROM Employee
WHERE age > 35 ;

AVG()

1. SELECT AVG(salary) FROM Employee;

2. SELECT AVG(salary) FROM Employee
WHERE age > 35;
