SQL

Union

Union

UNION is used to combine the result-set of two or more SELECT statements.

Every SELECT statement within the UNION must have the same number of columns.

columns must also have similar data types and in the same order

```
SELECT column(s) FROM table1
UNION
SELECT column(s) FROM table2
```

UNION ALL

UNION selects only distinct values

To allow duplicate values, use UNION ALL

```
SELECT column(s) FROM table1
UNION ALL
SELECT column(s) FROM table2
```

UNION with WHERE

```
SELECT column(s) FROM table1
WHERE condition

UNION

SELECT column(s) FROM table2
WHERE condition
```

Teacher (id, name, email, city, course)

Student (id, name, email, city, course)
