SQL

Update Command

UPDATE Command

Update command is used to edit records of the table.

```
UPDATE tablename
SET column1 = value1, column2 = value2, ...
WHERE condition
```

```
UPDATE Book
SET price = 100;
```

Update query without where clause will make changes in all the records of the table.

```
UPDATE    Book
SET    price = 100
WHERE    title = 'My First Language' ;
```

Above query will make changes in the price field to all the records whose book title is 'My First Language'.
