SQL

Order by

SELECT

```
SELECT   column(s)
FROM     tablename;
```

Order By

```
SELECT    column(s)
FROM      tablename
ORDRE BY  column1, column2, ....  ASC|DESC ;
```

The order by is used to sort the result-set in ascending or descending order

By default ascending order

```
SELECT * FROM Employee
ORDER BY salary ;
```

```
SELECT * FROM Employee
ORDER BY salary DESC ;
```

Order by several columns

```
SELECT * FROM Employee
ORDER BY salary, name;
```

The result of query will sort Employee table by salary in ascending order, but if some records have same salary values then these records will be arranged by employee names in alphabetical order.

```
SELECT * FROM Employee
ORDER BY salary ASC , name DESC ;
```

The result of query will sort Employee table by salary in ascending order, but if some records have same salary values then these records will be arranged by employee names in reverse of alphabetical order.

In ascending order NULL values will come first.

ORDER BY with WHERE Clause

```
SELECT * FROM Employee
WHERE name LIKE 'S%'
ORDER BY salary;
```
